In his new book, Professor Bluskov presents a collection of exquisite pick-5 lotto systems to the attention of lotto players and syndicates from around the world. A total of 126 current world record least expensive systems for a broad range of guarantees are presented. Professor Bluskov's follows the tradition from his pick-6 book and offers the newest and best on lotto systems (wheels), this time for pick-5 lotteries, including Mega Lotteries such as Powerball, Mega Millions, EuroMillions and Thunderball. It is a book of interest to every lottery player or a group of players who wish to play their numbers in an organized and balanced way. Lottery systems (wheels) guarantee wins in the same way a single ticket does while allowing playing with many numbers (7,8,9,10,11,12,13,14,... etc.) For instance, a single ticket guarantees a 4-win if four of the player's numbers are drawn. A lottery system is a well-organized set of tickets, giving the same guarantee, while allowing the players to use as many numbers as they wish. For example, system #5 from the book guarantees a 4-win whenever four of the player's 10 numbers are drawn; system #6 guarantees a 4-win whenever four of the player's 11 numbers are drawn, etc. Systems with many other guarantees are presented in this excellent strategy book. Each system has been constructed by Dr. Bluskov's new techniques of combinatorial and computer optimization, and, therefore, gives the most economical way of playing for a certain guaranteed win. All of these systems are world records in terms of performance (achieving certain guarantee in the minimum possible number of tickets). The book is quite unique; it is the only one on the subject, written by a mathematician and a lottery expert and we believe it is the best one in existence. The book offers a huge number of improvements in the area of classical lottery systems. Many of its features are completely new for the genre, for example, systems with double and multiple guarantees and tables of possible wins. Other unique features include the presentation and organization of the material: Each system appears as a separate article, including a table of all possible wins comments on various characteristics of the

system, such as minimality, balance and density; and the system itself. The book provides the tools to make playing the lottery as entertaining as playing a table game and gives the player strategies to attack the jackpot in a balanced and well-organized way. No mathematical knowledge is needed to either play or understand the lottery systems, which makes the book accessible to virtually every lottery player or a group of players. --From the publisher

COMBINATORIAL SYSTEMS (WHEELS) WITH GUARANTEED WINS FOR PICK-5 LOTTERIES INCLUDING EUROMILLIONS AND THE MEGA LOTTERIES BY ILIYA BLUSKOV PDF

This book is Dr. Bluskov's newest installment on entertaining lotto strategies, with focus on PICK-5 lotteries. The book covers any pick-5 lottery in the world (a lottery where the main draw has 5 numbers), for example, lotteries such as 5/25, 5/35, 5/39, 5/47, etc., including Mega lotteries such as Powerball, Mega Millions, EuroMillions, Thunderball, etc. It is a book for players or groups of players, who want to play more than five numbers and more tickets in a well-organized, balanced, and entertaining way. The author has used advanced methods of combinatorics and optimization to design the most economical lottery system (wheel) for any given guarantee. Each of the explicitly given systems in his book comes with a complete table of possible wins. The lottery player will find systems with double and multiple guarantees, excellent navigational tools and presentation. This book once again defeats the common belief that the lottery is a boring game and that the only excitement comes from watching the draw and matching some of the winning numbers. It shows that choosing the right way of playing your numbers, assessing the possible wins and filling the tickets can be as entertaining as a trip to Las Vegas! Players who are interested in lotto systems for PICK-6 lotteries can check Dr. Bluskov's pick-6 book titled Combinatorial Lottery Systems (Wheels) with Guaranteed Wins (also at Amazon).

Here's how it works and what to expect.
By Amazon Customer
Before I bought this book I hadn't played the lottery in years. When the Mega Millions soared to over 600M or whatever, I had to trudge out late and buy a lottery ticket for my husband who was too exhausted to buy one. I wanted to hide my head as I handed the clerk my money and number choices. I don't know why. Really. Maybe I just felt awkward playing a game that seems so futile. So I came home, lost the lottery, and got interested in the mathematics of lottery systems.

I'm no mathematician. In fact, reading Ilya Bluskov's book I got a bit frustrated once he hit some of the mathematics - isomorphic copies, disjoints, and permutations. But I found if I stuck with him everything was well explained, and I was able to understand how to use this book.

Here's what you need to know:

All important thing... YOU have to pick the numbers. That's why his system, or anyone else's, is incapable of guaranteeing a win. But if your numbers come up, your guaranteed to win something using his system, in most cases you'll win lots of times! So calculate birthdays, favorite ages, years, lucky numbers, or consult websites and determine the "hot" and "cold" numbers of the lottery you're playing.

Now, if this is a pick 5 lottery (pick fives includes lotteries with 5 numbers, or 5 numbers plus a bonus ball(s), Mega Millions is included), and you have your five favorite numbers in mind, go to the store and buy just ONE ticket. Also, don't bother buying or reading this book. If, however, you have more than 5 numbers in mind, then you'll need a system, or "wheel" to maximize your win potential.

Depending on how many numbers you picked will determine what wheel to play.

Depending on how you would like to win, will determine how many tickets you want to buy.

For example, if you picked 15 numbers, you may decide to use System #51: Guaranteed 3-Win if 4 of the numbers drawn are in your set of 15 numbers. You'll need to purchase 24 combination tickets.

Maybe you picked 15 numbers but just want a Guaranteed 3-Win if 3 of the numbers drawn are in your set of 15 numbers. Then System #32 is what you'll use and you'll need to buy 56 tickets.

You won't need to spend that much money, especially if you only picked fewer numbers. There are smaller less expensive wheels (the one's I play).

Technically to play System #51, you would need to buy 3,003 tickets! Fortunately Iliya Bluskov has done the math for us, and determined the minimum possible tickets you'll need to purchase to guarantee a maximum win. Basically, he's given you the combinations you'll need to score the most prizes buying the least amount of tickets. If you bought all 24 tickets for System #51, and 5 of your numbers were selected, you would win the 5-win, one or two 4-wins, and at least three 3-wins!

So if you've been buying $10 worth of lottery tickets without a system, you're loosing opportunities. Pick your numbers, use a wheel, and play for fun. What I've learned from this book is you'll eventually win, but most likely not the jackpot. So far I've won a $1! I've only played twice, but it's made the game interesting and enjoyable.

Hope that helps. Buy the book!

Great wheels
By SISSY
Much better than Gail Howards books. These wheels are short and really mixes up the numbers to get good combinations.

My favorite wheel is on page 265.. Wheel 11 numbers for $11.00.

All the wheels in this book are for the person who wants to spend less on wheels.

The author in the forward introduces himself to you and explains his background in working with lottery systems. This is so important to me, to know a person with years of experience can take the time to write a book about the lottery systems and make them mix up the numbers so nicely and at a cost for the player on a budget.

I also have the book "Combinatorial Lottery Systems (Wheels) with Guaranteed Wins" for the 6 numbered games.

I do prefer the pick 5 book as I play the pick 5 games.

Thank you to the author for taking the time to write these wonderful books. They are a great addition to my lottery book library.

Wheeling At It's Highest Level
By Sam
This is a book Dr. Bluskov has written to supplement his "Combinatorial Lottery Systems (Wheels) with Guaranteed Wins," which provides wheels for pick-6 lotteries, and which does the same for pick-5 games.

While most books on lottery strategies are based on superstition, instinct, and a spotty knowledge of mathematics, Dr. Bluskov speaks mathematics at its highest level. I will not consider writing anything for publication on the subject of lottery wheels without first consulting Dr. Bluskov. He always is happy to comment on my work and I always heed his advice. When using an abbreviated wheel in a calculation I will not consider any wheel but one of his. Not only can I be assured that it is minimal for a given guarantee, but every wheel comes with a Table of Probable Wins, which is necessary for serious calculations and can be very difficult to compute.

There is no heavy mathematics in either book. That is to be found in Dr. Bluskov's many research papers on the subject of "coverings," the technical name for the combinatorial objects that include lottery wheels. I consider Dr. Bluskov to be the world's foremost expert on lottery wheels and for that reason his wheels to be the most trustworthy.
